Writing Task 1

	New York City (all five districts)
Year	Population
1800	79,216
1900	3,437,202
2000	8,009,185

	Manhattan	
Year	Population	As percentage (%) of total population
1800	60,515	76%
1900	1,850,093	54%
2000	1,538,096	19%

	Other districts (Brooklyn, Bronx, Queens, Staten Island)	
Year	Population	As percentage (%) of total population
1800	18,701	24%
1900	1,587,109	46%
2000	6,471,089	81%

Question:
You should spend about 20 minutes on this task. Write at least 150 words.
The first table below shows changes in the total population of New York City from 1800 to 2000. The second and third tables show changes in the population of the five districts of the city (Manhattan, Brooklyn, Bronx, Queens, Staten Island) over the same period.
Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Answer:

The three tables describe the changes in the total population of five districts which are Manhattan, Brooklyn, Bronx, Queens and Staten Island of New York City between the years 1800 to 2000.

The first table mentions the change in the population of all five districts. The population gradually increases from the year 1800 to 2000. The rate of population is highest in the year 2000 having more than seven lacs people from the year 1800. Around 3.5 lacs population is seen in 1900 which increases by 5 lacs more in the

next century.

The next table describes the population change in only Manhattan district. Here the highest rate of population is seen in 1900 having around 18 lacs of people. The previous century has only 60,515 people and in 2000, the number of population decreases by 3 lacs from the year 1900. In case of percentage of total population, the year 1800 holds the highest position having 76%, then comes year 1900 with 54% and the last is year 2000 with 19%.

The last table is about the other four districts Brooklyn, Bronx, Queens and Staten Island. The maximum position is held by the year 2000 having more than 64 lacs of people and the number gradually reduces within the previous two centuries. The same scenerio is seen in case of percentage of total population. 2000 holds the highest rate having 81%, 1900 has 35% less and the year 1800 has only 24%.

Writing Task 2

Question:

You should spend about 40 minutes on this task. Write at least 250 words.
Some people believe that allowing children to make their own choices on everyday matters (such as food, clothes and entertainment) is likely to result in a society of individuals who only think about their own wishes. Other people believe that it is important for children to make decisions about matters that affect them.
Discuss both these view and give your own opinion.

Answer:

According to some people, giving access to children about making their own decisions about daily activities like food,clothes and entertainment can cause a society of individuals only thinking about their own wishes while others argue that children must be given the oppurtunity to make choices about things that affect them. I personally think that children should not be given full access about making decisions without consulting their parents as they are not fully experienced about life.

Nowadays, children like to get independent in every aspect of their lives. From choosing what food to eat, which clothes to wear they like to take every decision themselves without considering other's opinion. This type of attitude might cause many problems for the children in future. Parents, teachers or elderly ones are more experienced in life than children, so there are some aspects which they know better than younger ones. But having the tendency to do everything according to own choices leads to some bad choices in life. If this attitude is not fixed before, a society will be created in future where everyone only thinks of own benefit rathr than the development of society. A study from Toronto University from Canada shows that almost 78% people after turning 18 starts living alone without being fully mature and gets involved in many types of wrongdoings like being addicted, dropping out from college, engaging with wrong group of people etc.

On the contrary, another group of people argue that it is important for children to make their own decisions aboout matters affecting them. If children are given the access of choosing their own choices from a young age, they learn to become independent. Self confidence and the ability to make decisions in any situation can be obtained. Rather than waiting for others to make choices for them, they can take their own decisions and be responsible for it. A research from Texas University from USA shows that, children who can make their own choices from a young age get more responsible and independent in the future. While choosing career, people who choose what they want to do in life prospers more than the ones that choose according to their parents.

Personally I think that children must be given the oppurtunity to take decisions on their own but in some

specific cases they need to consult with their parents first. As parents or elderly ones know about life more than children, they surely know the consequences of some tasks better. So it is better to take advice from them before doing serious works.

Some people say that children must not be allowed to make their own choices while others deny this statement. If parents allow their children to make decisions by consulting with them and taking their opinions more seriously, it would be better for both the children and society.

IELTS Writing Task 1 Report

Overall Band: 3.5

TASK RESPONSE: 3

COHERENCE COHESION: 4

LEXICAL RESOURCE: 4

GRAMMATICAL RANGE: 4

Examiner Comments:

The candidate has attempted to describe the provided tables detailing population changes in New York City districts. While the response generally follows the structure of the tables, there are significant weaknesses across all assessment criteria, particularly in Task Response and accuracy.

Task Response: The most critical issue is the widespread inaccuracy in reporting figures and trends. Many key numbers are vastly misrepresented (e.g., 'lacs' instead of millions, incorrect calculations of increases/decreases), and a major trend in the 'Other districts' table is completely reversed (stated as 'reduces' when it 'increases'). This indicates a fundamental failure to accurately interpret and report the data, which severely impacts the score. There is no overall summary or overview of the main trends.

Coherence and Cohesion: The response is organised into logical paragraphs, each focusing on one table, which is a positive. However, there is a lack of sophisticated cohesive devices, leading to some repetitive phrasing. Attempts at cohesion, such as 'The same scenerio,' are undermined by factual inaccuracy. There is no clear overall progression of the argument.

Lexical Resource: The vocabulary used is basic and repetitive, with phrases like 'rate of population' used incorrectly instead of 'number of people' or 'population figures.' The use of 'lacs' is inappropriate for academic writing. There are several instances of awkward word choice and one spelling error ('scenerio'). The range of vocabulary for describing trends and numbers is limited.

Grammatical Range and Accuracy: The candidate uses a mix of simple and some attempt at complex sentence structures, but many sentences contain grammatical errors, awkward phrasing, and incorrect tenses. These errors frequently obscure the meaning, making parts of the text difficult to understand clearly. Examples include incorrect subject-verb agreement, inappropriate prepositions, and clunky sentence construction.

Corrections:

IELTS Writing Task 2 Report

Overall Band: 5

TASK RESPONSE: 5

COHERENCE COHESION: 5

LEXICAL RESOURCE: 5

GRAMMATICAL RANGE: 5

Examiner Comments:

The essay addresses the prompt by discussing both sides of the argument regarding children's decision-making and provides a personal opinion. However, the development of ideas is limited; points are made but not always thoroughly or convincingly supported. The reliance on unsubstantiated 'studies' weakens the overall credibility of the arguments. While a clear position is presented, its nuanced evolution from the introduction to the conclusion could be more smoothly integrated.

The essay demonstrates some logical organization with clear paragraphing for different ideas. However, the final paragraph largely rephrases earlier points, hindering a strong sense of conclusion or progression. Cohesive devices are used, but sometimes they are mechanical or slightly awkward, impacting the overall flow of the text.

The vocabulary used is adequate for the topic but lacks range and precision. There are frequent errors in word choice, collocations, and spelling, which occasionally obscure meaning and demonstrate a limited control over academic vocabulary.

Grammatical accuracy is a significant area for improvement. Errors are common in subject-verb agreement, preposition usage, article usage, and general sentence structure. These errors frequently impede understanding and require the reader to re-read sentences for clarity, indicating a lack of consistent grammatical control. While there is an attempt to use complex sentences, accuracy issues limit their effectiveness.
